INPUT - connect to guitar or effect before loop or loop before loop

OUTPUT - connect to amp or another loop

L SEND - connect to first pedal (in loop) input

L RETURN - connect to last pedal (in loop) output

* Use the SmolskiTech Mini Loop anywhere to eliminate loading down of signal. For use where you experience loss of tone and/or volume while pedals are bypassed (or off). L Send is grounded when bypassed to eliminate potential noise. With a tuner connected to L Send only, output is grounded for silent tuning. Optional AC adapter is for LED use only. Mini Loop operates otherwise without LED. All SmolskiTech pedals accommodate right angle plugs and are hand wired for True bypass.
